

Sanjeev Aged 21 Course IT studies at Softwarica College

I am currently studying IT. I just finished my second year at Softwarica College of IT & E-commerce. There were four subjects in this semester.

- AD (Agile development)
- DDD (Database Design and Development)
- PIIT (Professional Issues in IT)
- CP

This semester was quite fruitful. I learnt in detail about Java. I developed a simple application used in Cyber Café for money management and systematic execution of work. Its main objective was to reduce the paperwork. There was a presentation on the application I built. It was quite good though I was nervous at the beginning. It was like going into the field and explaining about the software to our client.

Teachers asked various questions about the technical part of the software and I knew many things from that. I also did assignments of DDD in which I had to develop the website of a company. Database in this semester was quite vast and we learnt about the data warehouses, distributed database and all the details about the database. In AD we learnt about the agile methodology in software industry. This methodology is the most efficient and reliable methodology in present time in software industry. But it requires more skilled manpower and is costly. PIIT was all about the professional issues in IT. I also gained knowledge about green IT which focuses on the sustainable

environment practice in the IT industry such as network printer, using recycling products etc. I learnt about maintaining the healthy work environment and how to keep oneself healthy and active in the work.

Our college organizes various extracurricular activities from time to time. Recently it conducted the eye therapy checkup program in which people were taught to get rid of glasses slowly via therapy. And after that we had intra college girl futsal tournament. They also organized various workshops on different frameworks used in PHP and Java and JavaScript and web development. We had a two days workshop on the CI i.e. Code Igniter framework used in web development using PHP. This framework was object oriented and simplified the code. We learnt to use MVC pattern in this framework in PHP. Just few days before our college had organized the Softwarica anniversary day program. The program was huge success. There was wonderful performance from students from different batch. Event and Sport club had organized that program and all the teachers and student had participated actively.

I have been applying for internship in various companies. Sadly I was not selected but I gained lot of knowledge from the interview. I knew my weaknesses and the reasons for not being selected. So, I didn't become so much disappointed since I got to learn a lot from those experience. Also, I plan to make the website for MMSD which will be a plus point for my career. I am expecting to learn more from that project.

Lastly, I feel very privileged to have got your scholarship and would like to thank you all for your help and support because of which I got this golden opportunity to study and prosper my career. Lots of love and Happy New Year 2018.

Thank you, Sanjeev.
